I build AI-driven and security-focused solutions to tackle real-world cybersecurity challenges.

Objective

Computer Science student specializing in Cybersecurity, with project experience in AI-based deepfake detection, Zero Trust access, security tooling, and hybrid cloud security architecture. Skilled in Python, deep learning, model evaluation, network security concepts, and web development. Seeking opportunities to apply technical skills to practical security and AI challenges.

Skills

Python | Java | JavaScript | TypeScript | Machine Learning | Deep Learning | CNNs | Vision Transformers (ViT) | Transfer Learning | PyTorch | Model Evaluation (AUC, CLLR, HTER) | Hybrid Cloud Security | Identity and Access Management (IAM) | Network Security | Network Segmentation | AWS Security Groups | Virtual Private Clouds (VPCs) | Kubernetes Concepts | Microservices Security | Secure Remote Access | HTML | CSS | Next.js | React.js | Node.js | Express.js | REST APIs | MySQL | MongoDB | PostgreSQL | SQLite | GitHub | Git | Docker | Jenkins | Prisma | GitHub Actions | Linux

Professional Experience

Cybersecurity Virtual Intern, Cisco Networking Academy **Jun–Aug 2026**

- Developed a proposed secure hybrid data center network architecture connecting private data centers and public cloud services.
- Addressed IAM, cloud security groups, and VPC segmentation to reduce unauthorized access and limit lateral movement between applications.
- Evaluated security considerations for hybrid workloads, Kubernetes-orchestrated applications, microservices, and secure remote access.

Cyber Security Intern, 1Stop.ai, Remote **Jul–Aug 2026**

- Completed 3 cybersecurity projects covering phishing simulation, Android penetration testing, and digital forensic analysis.
- Studied 5 OWASP Android vulnerability categories (M1–M5) in a mobile application security testing lab.
- Used Autopsy for forensic analysis of artifacts such as browser history, deleted files, registry data, and metadata.

Front-End Web Development Intern, 1Stop.ai, Remote **Jul–Aug 2026**

- Built 3 web development projects: a portfolio website, Bootstrap/HTML calculator, and To-Do list.
- Developed and tested front-end interfaces using HTML, CSS, Bootstrap, and JavaScript.

Projects

FORENSIC-AI: Intelligent Deepfake Video Detection for Digital Evidence

- Developed an AI-based deepfake detection system for assessing the authenticity of digital evidence.
- Fine-tuned a Vision Transformer (ViT) and evaluated performance across 3 datasets using AUC, CLLR, and HTER.

ZeroIAM

- Developed a Zero Trust access platform that evaluates user identity and device security posture before granting resource access.

Security Studio

- Built a privacy-focused security workspace integrating 38 security modules and 50+ security events/workflows.

Education

NIIT University, Jaipur **2023–Present**
B.Tech Computer Science (Cybersecurity)

Aadhunik Public School (CBSE), Dharamshala **2021–2022**
XII

Montessori Cambridge School (CBSE), Pathankot **2019–2020**
X

Licenses & Certifications

Cisco AICTE Virtual Internship Program 2026, Cybersecurity | Cisco Networking Academy | Jun–Aug 2026
Junior Cybersecurity Analyst | Cisco Networking Academy | Jun 2026
Cybersecurity Essentials | Cisco Networking Academy | Jun 2026

Leadership Experience

Secretary, Rangmanch NU

- Managed and coordinated club activities and events.
- Led team operations and contributed to event planning and execution.

Accomplishments

- 1st Prize, Theatre Competition, GD Goenka University
- 2nd Prize, Nukkad Natak Competition, MNIT Jaipur
- 2nd Prize, Nukkad Natak Competition, LNMIIT Jaipur
- 2nd Prize, Nukkad Natak Competition, BML Munjal University
